

 what is the pesticide usage in spain from 2015 onwards? explain the trend

 Pesticide usage in Spain decreased from 77,217 tonnes in 2015 to 52,907 tonnes in 2023, with a notable drop starting in 2022. This aligns with the EU's 2030 target to reduce pesticide use by 50%, as outlined in the EU biodiversity strategy and Farm-to-Fork initiatives. The policies emphasize sustainable practices and risk reduction, leading to Spain's proactive measures to meet these goals.

Pesticide Usage in Spain (2015-2023)

How this answer was derived

This answer draws on the `pesticide_usage` dataset. Figures were restricted to area = Spain, over 2015 onwards, then aggregated as value of value grouped by year. This answer draws on the `pesticide_usage` dataset, which records tonnage of pesticide use and intensity (kg per ha of cropland). Figures were restricted to element = Agricultural Use; area = Spain; item = Pesticides (total), over 2015 onwards, then aggregated as sum of value grouped by year, covering 9 record(s). Organisational policy excerpts were retrieved for context (listed under the supporting evidence).

What was measured: Agricultural Use of Pesticides (total), in t

Source methodology — quoted from the dataset's own methodology notes (Layer 2)

Statistical process — Imputation

Gap filling was performed by linearly interpolating between available values, or by carrying forward or backward last available values in a time series. Gap-filled values by pesticides sub-components are not disseminated.As part of the 2023 release, for countries with gaps in reporting of a timespan of 10 years historically or recently, the entire time seri ...

1. Searched the dataset catalog for "pesticide usage Spain" → found 1 candidate dataset(s).
2. Queried dataset `pesticide_usage` , filtered area = Spain, years 2015 onwards, value of value grouped by year.
3. Queried dataset `pesticide_usage` , filtered element = Agricultural Use; area = Spain; item = Pesticides (total), years 2015 onwards, sum of value grouped by year → 9 record(s).
4. Searched policy documents for "Spain pesticide reduction policies 2022" → 3 excerpt(s).

Policy evidence

eu biodiversity strategy.pdf, p. 7

Fork Strategy, the Commission will take action to reduce by 50% the overall use of – and risk from – chemical pesticides by 2030 and reduce by 50% the use of more hazardous pesticides by 2030. This must be supported by the full implementation of the EU Pollinators initiative 31 . By the end of 2020, the Commission will review the initiative and propose additional measures if necessary. To provide space for wild animals, plants, pollinators and natural

climate legislation in full, identifying with Member States the nutrient load reductions needed to achieve these goals, applying balanced fertilisation and sustainable nutrient management, and by managing nitrogen and phosphorus better throughout their lifecycle. To this end, the Commission will work with Member States to develop an Integrated Nutrient Management Action Plan in 2022. The Farm to Fork strategy will address the reduction in the use and risk
